

2013

PERC

Dry Cleaner Compliance Calendar

Air emission standards for perchloroethylene dry cleaning facilities

The U.S. Environmental Protection Agency (EPA) has set standards for the control of perc releases from dry cleaning facilities. Perc is suspected of causing cancer in humans. These emission standards are different from hazardous waste regulations. They

are based on use of perc, not generation of perc related drained spent cartridge filters, still bottoms, or filter muck waste. These emission standards are also different from the Occupational Safety and Health Administration (OSHA) regulations that set a time-

weighted average of 25 ppm of perc as the exposure limit for employees.

Coin-operated dry cleaning facilities are exempt from these requirements.

Requirements Summary	Small Area Sources*	Large Area Sources*	Major Sources*
Dry-to-dry facilities:	Purchase less than 140 gallons perc/year:	Purchase equal to or between 140-2,100 gallons perc/year:	Purchase more than 2,100 gallons perc/year
Process vent control			
Constructed or reconstructed before December 9, 1991 or	Closed loop dry-to-dry machine	Closed loop dry-to-dry machines with RC** (CA installed before September 22, 1993, can remain; it does not have to be replaced by RC)	
On or after December 9, 1991, but before December 21, 2005 or	Closed loop, dry-to-dry machine with RC**	Closed loop, dry-to-dry machine with RC** followed by CA** operated immediately before or as the door is opened	
On or after December 21, 2005	Closed loop, dry-to-dry machine with RC** followed by CA** operated immediately before the door is opened		
Fugitive Control			
	Sealed containers; leak detection/repair		
Monitoring			
	If a RC is present, measure weekly the outlet temperature (before the end of the cool down or drying cycle) or the pressure (during the drying phase) to confirm the value is within the manufacturers' operating instructions. If a CA is present, use a colorimetric detector tube or a perc gas analyzer to monitor weekly.		
Inspections			
	Inspect weekly for perceptible leaks (those you can see, feel, or smell). Inspect for vapor leaks on a monthly basis using a halogenated hydrocarbon detector or a perc gas analyzer. Repair leaks and maintain records.		Inspect weekly for perceptible leaks. Inspect for vapor leaks on a monthly basis using a perc gas analyzer and operate it according to EPA Method 21. Repair leaks and maintain records.
Reporting			
	Submit a notification of compliance status form within 30 days of startup. This notification is required when a new machine is installed at an existing site.		

* Area sources are permanently exempted from air permitting requirements. All major sources need Part 70 (federal) air quality permits. ** or equivalent control Refrigerated Condenser (RC) • Carbon Adsorber (CA) • All perc transfer machines were required to be removed by July 28, 2008.

If located in a building with a residence

If you installed a perc machine in a building with a residence: • after December 21, 2005, then you should have removed your perc machine by July 27, 2009
• before December 21, 2005, then you must eliminate our perc machine by December 21, 2020

instructions for use

general

You may use this calendar to keep records required by DHEC Rule for air program compliance. Keep these records at your facility for 5 years.

South Carolina Department of Health
and Environmental Control

Record the date you bought PERC this month, if any.

If you bought PERC this month, record the amount and add it to the subtotal. This amount will also go on next year's calendar for this same month under SUBTRACT PERC PURCHASED.

+

Enter running total from last month.

Enter the amount of PERC you bought during this same month last year, from last year's records or calendar.

Subtract that amount.

This is your 12 month running total if you do not buy PERC this month.

This is your 12 month running total if you bought PERC this month. Record the bottom number in this column on next month's form in line TOTAL FROM LAST MONTH.

condenser temp. log

Check the outlet temperature of the refrigerated condenser every week. Record the temperature and date in the space provided. In the block marked "Is temp less than or equal to 45° Fahrenheit (7.2° Celsius)?" check "Y" or "N" for "yes" or "no". If you checked "N," the machine must be repaired.

inspections

If you buy **140 gallons or more** of PERC per year, you must check your machine weekly for leaks and record the results.

If you buy **less than 140 gallons** of PERC per year, you must conduct and record leak inspections at least every other week.

Record the results of the inspections on the calendar. If leaks are found, they must be repaired within 24 hours. Indicate in the "DATE REPAIRED" block when repairs are completed. If parts must be purchased, indicate the dates they are ordered and the date installed. Parts must be ordered within two working days of leak detection and installed within five working days of receipt.

Dry Cleaner Compliance Calendar

Time to order your 2014 Dry Cleaner Compliance Calendar

Please complete the following order form:

Company name: _____

Point of contact name: _____

Mailing address: _____

City/State/Zip code: _____

Total Number of Calendars Requested (One calendar needed for each machine): _____

Please identify, by street address, each location with operational perc machines:

Location 1: _____

Location 2: _____

Location 3: _____

Location 4: _____

All requests for printed copies of the 2014 calendar must be received no later than November 30, 2013.

Please return your request:

By mail: SBEAP – Bureau of Air Quality
SCDHEC
2600 Bull Street
Columbia, SC 29201-1708

By fax: 803-898-4487

By email: smallbusinessinfo@dhec.sc.gov

The 2014 calendar will also be available online under the resource link at www.scdhec.gov/sbeap.

Air Emissions Compliance Steps

Operation/maintenance

- The air-perc vapor should be recirculating back through the machine without venting to the atmosphere (closed loop).
- Close the door of each dry cleaning machine immediately after transferring articles to or from the machine; keep the door closed at all other times.
- Operate and maintain dry cleaning systems according to manufacturer's specifications and recommendations.
- Operate each RC to not vent or release the air-perc gas-vapor stream contained within the dry cleaning machine to the atmosphere while the dry cleaning drum is rotating.
- Operate each RC to prevent air drawn into the dry cleaning machine when the door of the machine is open from passing through the RC.
- Do not bypass a CA at any time.
- Desorb each CA according to manufacturer's instructions.

Fugitive controls

- Use solvent tanks or containers to store all perc and perc related waste. Ensure that these tanks and containers are closed so that they have no perceptible leaks. Except that you may leave containers for separator water uncovered

if it is necessary for proper operation of your machine and still.

- Drain all cartridge filters in their housing, or other sealed container, for a minimum of 24 hours (or treat such filter in an equivalent manner) before removal from the dry cleaning plant. Air emissions compliance steps

Monitoring

1. Refrigerated Condenser (RC)

Measure the refrigeration system high pressure and low pressure during the drying phase to determine if they are in the range specified by the manufacturer's operating instructions.

Alternately you may monitor temperature. Measure the temperature of the air-perc gas-vapor stream on the outlet side of the RC to determine if it is equal to or less than 7.2°C (45°F) before the end of the cool down or drying cycle while the gas-vapor stream is flowing through the condenser. The temperature sensor should be designed to measure a temperature of 7.2°C (45°F) to an accuracy of $\pm 1.1^\circ\text{C}$ (2°F).

2. Carbon Adsorber (CA)

If you use a CA instead of a RC or you use a supplemental CA and

the exhaust passes through the CA immediately upon door opening, measure the concentration of perc in the exhaust of the CA. Use a colorimetric detector tube or perc gas analyzer that measures a concentration of 100 ppm by volume of perc in air to an accuracy of ± 25 ppm by volume. Take the measurement while the dry cleaning machine is venting to the CA at the end of the last dry cleaning cycle prior to desorption of the CA or removal of the activated carbon. The perc concentration needs to be less than or equal to 100 ppm.

A sampling port for monitoring within the exhaust outlet of the CA must be provided in a place that is easily accessible; located at least eight times the diameter of the stack or duct downstream from any flow disturbance (bend, expansion, contraction, or outlet); not downstream from any other inlet; and two times the diameters of the stack or duct upstream from any flow disturbance.

If you use a supplemental CA and the air-perc gas-vapor stream passes through the CA before the machine door is opened, measure the concentration of perc in the dry cleaning machine drum at the end of the

2013 Dry Cleaner Compliance Calendar

New Air Pollution Control Regulations continued

dry cleaning cycle. Use a colorimetric detector tube or perc gas analyzer that measures a concentration of 300 ppm by volume of perc in air to an accuracy of ± 75 ppm by volume. Place the tube or analyzer into the open space at the rear end of the drum immediately after door opening. The perc concentration needs to be less than or equal to 300 ppm.

If required monitoring detects values that do not meet the parameters set in the standard, make adjustments or repairs to the dry cleaning system or control device to meet those values. If repair parts are needed, make a written or verbal order within 2 working days of detecting the value. Install repair parts within 5 working days after receipt.

Inspection requirements

Inspect components for leaks while the dry cleaning system is operating.

Inspect weekly for perceptible leaks (those you can see, feel, or smell). Inspect monthly using a detector. Area sources may use a halogenated hydrocarbon detector or a perc gas analyzer. Major sources must use a perc gas analyzer and operate it according to EPA

Method 21. Inspections using a halogenated hydrocarbon detector or a perc gas analyzer suffice for perceptible leak inspections. Follow the manufacturer's instructions. Repair all leaks detected during inspections within 24 hours. If repair parts are needed, make a written or verbal order within two working days of detecting the leak. Install repair parts within five working days after receipt.

The National Emissions Standards for Hazardous Air Pollutants (NESHAP) for Perchloroethylene Dry Cleaning Facilities requires documentation of operational parameters. This calendar provides a concise document to assist small facilities to maintain the necessary records. Funding for this project is provided from emissions fees submitted to the Bureau of Air Quality.
